DIANA JOHN

Software Engineer turned Content Engineer | AI-Ready Documentation & Chatbot Evaluation | Docs-as-Code
dianacjohn@gmail.com | +1-916-432-9773 | linkedin.com/in/diana-biji | California, USA

Software engineer turned content engineer who builds documentation workflows and tooling, prepares documentation for AI assistants and tests whether they tell customers the truth, and writes developer documentation engineers can trust. Brings 11+ years in technical documentation and 10 years in software development and testing, documenting complex enterprise and developer-facing software such as SR Linux (a data center network operating system), a service management platform with API reference documentation, and endpoint security SDKs documented by reverse-engineering C/C++ code. Works in docs-as-code workflows (Markdown, AsciiDoc, DITA, Git, GitLab, Gerrit), mentors writers, and presents at industry conferences.

EXPERIENCE

Nokia – Senior Technical Writer
Sunnyvale, CA | Nov 2022 – Present
Senior technical writer and release notes team lead for SR Linux, Nokia's data center network operating system. Authored installation, configuration, and routing documentation, and built AI skills for the TechPubs Cursor AI workgroup's shared library.

- Partnered with one other writer to convert 54 pages of SR Linux security content into chunked Q&A Markdown with DITA-OT for the RAG pipeline behind AskSRL, the AI assistant in the SR Linux CLI. Evaluated answers against the source docs, identified failure patterns (ungrounded answers, hallucinated features, truncated sections, dropped brackets in code samples), and recommended finer chunking to improve retrieval.
- Designed, ran, and evaluated Kapa.ai chatbot test scenarios after its portal integration, surfacing unanswerable questions that led to a new out-of-scope response directing customers to Nokia Services.
- Proposed and built an email-to-Jira automation with Nokia IT, outsourced IT partners, and the Doctools team, filtering for feedback emails only, and rolled it out across 14 to 15 products.
- Lead the SR Linux release notes process across 10 to 15 releases, co-authored its standards, and mentor new writers on the process.
- Built Cursor skills for release notes, glossary maintenance, and documentation planning from PRDs and SME input for the TechPubs Cursor AI workgroup's shared library (colleagues still use the release notes skills), and wrote in-house automation scripts through prompt engineering with Nokia's internal AI platform.
- Co-developed the WebHelp version drop-down for switching between documentation releases, writing AI-assisted Python scripts, then diagnosed and fixed an infinite loop on nonexistent versions that flooded production logs and degraded the server over a weekend, using AI-assisted debugging.
- Tested documented configurations on the SR Linux simulator before publishing, covering SR-TE, IS-IS multi-topology, multicast, RADIUS, DNS, and SSH, and reviewed content with networking and engineering SMEs.
- Run a docs-as-code release flow: author DITA content in Oxygen XML Author, commit to GitLab through SourceTree, build WebHelp output, and deliver it to staging and production.
- Improved the WebHelp reader experience as an active member of the Oxygen WebHelp workgroup by reviewing the interface against competitor products and customer feedback, and harmonized WebHelp guides across Nokia communication teams.

Nokia – Principal Information Developer, Service Management Platform (SMP)
Bangalore, India | Oct 2020 – Sep 2022
Led end-to-end documentation for multiple Service Management Platform releases, including user and admin guides, API reference documentation, and release notes, working with globally distributed cross-functional teams in an Agile (SAFe) environment.

- Automated delivery of generated Javadoc and Swagger documentation into the TechPubs repository by adding dependencies to Maven POM files, and wrote Python scripts, adapted from online references, to package the documentation files.
- Made auto-generated Swagger/OpenAPI reference documentation easier to use by writing conceptual and overview content in AsciiDoc and editing API descriptions for clarity and accuracy through Gerrit review.
- System-tested complex features, such as Bot channel integration, before documenting them so the docs matched product behavior, and streamlined editorial review workflows.

Nokia – Senior Information Developer, Service Management Platform (SMP)
Bangalore, India | Apr 2017 – Sep 2020
Documented multiple SMP releases, including user and admin guides, API reference documentation, and release notes. Promoted to Principal Information Developer in October 2020.

- As a member of the API workgroup, set API documentation standards adopted across Nokia technical communication teams by surveying Nokia Software teams on Swagger practices, benchmarking against industry standards, and reviewing the Swagger UI against competitors.

Collabera (consultant at McAfee / Intel Security) – Technical Writer, ePO Developer Documentation
Bangalore, India | Aug 2015 – Mar 2017
Created internal developer documentation for McAfee ePO (now Trellix ePO), an endpoint security management platform, and its cloud ecosystem, supporting product and engineering teams.

- Documented previously undocumented APIs and developer workflows for the endpoint agent (formerly McAfee Agent) by reverse-engineering C/C++ code and working from Doxygen API references, DOT graphics, and White Star UML sequence diagrams.

- Documented the DevOps-based AWS cloud infrastructure and the ePO cloud ecosystem for developer onboarding.
- Wrote and tested migration guides for product teams moving from centralized to distributed version control, and wrote case studies and integration guides for TeamCity, Git, and Gerrit.
- Documented the architecture of log-monitoring (observability) systems built on the ELK stack (Elasticsearch, Logstash, Kibana).
- Maintained knowledge base articles in the Trellix Planet CMS, gathering content from onsite leads, developers, SMEs, QA, and support teams to keep them accurate.

Huawei Technologies (Contract) – Sr. Software Engineer, Software Application Testing
Bangalore, India | Aug 2010 – Jul 2015
Tested Android applications on Huawei handsets and tablets across multiple releases, owning test planning, execution, and defect triage.

- Developed test plans, traceability matrices, and test strategies for each release, and tracked execution in JIRA.
- Tested the contacts, dialer, calendar, and SNS applications, and began automating feature tests with Robotium.
- Triaged defects with onsite leads and developers, documented issue reproduction steps, and ran regression tests on fixed builds.

L&T InfoTech – Software Engineer
Bangalore, India | Sep 2005 – Jul 2010
Developed and tested telecom and mobile software for customers including Airvana, Samsung, NEC, Sony Ericsson, NASCAR, and ADA, and wrote requirements, design, and verification documents.

- Delivered CDMA 1xRTT femtocell base station software for Airvana by deriving requirements from the cdma2000 MAC and TDSO standards and verifying the implementation through CLI-based command testing.
- Built the Fault Management module of the OAM software for Samsung's Mobile WiMAX ASN Gateway, owning test plans, test cases, and report layouts, and testing through CLI and WebMT during system integration.
- Developed and tested multimedia and mobile applications for NEC, Aplix, Sony Ericsson (S60), and NASCAR (iPhone and Android), and contributed to SRS, HLD, and DLD documents.
- Technologies: C++, VC++ (MFC), Linux.

SKILLS & TOOLS

AI & Automation: AI assistant evaluation and hallucination testing, RAG content preparation, prompt engineering, Claude, Cursor, Kapa.ai, internal LLM platforms, AI-assisted Python scripting, email-to-Jira automation

Structured Authoring & Docs-as-Code: DITA/DITA-OT (concept, task, and reference topics; content reuse; structured content modeling), information architecture, Markdown, AsciiDoc, XML, DocBook, Oxygen XML Author and WebHelp, Trellix Planet CMS, Microsoft Office, Adobe Acrobat

API & SDK Documentation: OpenAPI/Swagger, REST APIs, Javadoc, Doxygen, C/C++ code analysis, UML, DOT

Version Control & DevOps: Git, GitLab, Gerrit, SourceTree, Maven, Subversion (SVN), Tortoise clients, Confluence; familiarity with Bitbucket, Azure DevOps, and TeamCity

Programming & OS: C, C++, Java, Linux

Networking: SR Linux (data center network OS), enterprise networking, IS-IS (multi-topology MT0/MT2), Segment Routing Traffic Engineering (SR-TE), multicast, RADIUS, DNS, SSH, CLI-based configuration testing, YANG data models. Earlier career: CDMA (1xRTT) femtocell/base station (RAN) software, Mobile WiMAX gateway, and WCDMA handset software, OAM fault management

Observability & Cloud-Native: ELK stack (Elasticsearch, Logstash, Kibana) architecture documentation; AWS cloud infrastructure documentation; basic Kubernetes and Docker

Documentation Types: user, admin, configuration, installation and upgrade guides; API and SDK docs; release notes; knowledge base articles; case studies; training presentations

Process: style guides, documentation standards, release notes management, revision tracking, technical accuracy review, system testing before documenting, test scenario development, regression testing, Jira, Agile (SAFe/Scrum), mentoring

EDUCATION

Bachelor of Engineering in Information Science and Engineering
Visvesvaraya Technological University (VTU), Belgaum, Karnataka, India

CONFERENCE PRESENTATIONS & RECOGNITION

- Presented "API Documentation Challenges" at STC India 2019.
- Co-presented "Chatbots in Content Delivery" with Poornima Goswami at the STC Regional Conference, Bangalore, 2018.
- Nokia Achievement Award for representing the company at the Society for Technical Communication (STC) Bangalore Chapter, 2018.
